

	Operation	Parameters	Result	Dim	Examples
Basics / Wrangling	Initialize CLIJ	[], HD, GFX or CPU			<code>run("CLIJ Macro Extensions", "cl_device=[]");</code>
	Push			2D 3D	<code>// send current image to GPU input = getTitle(); Ext.CLIJ_push(input);</code>
	Pull			2D 3D	<code>// get result image from GPU back Ext.CLIJ_pull(output);</code>
	Create	1024, 1024, 8		2D 3D	<code>Ext.CLIJ_create2D("new2D", w, h, bitDepth); Ext.CLIJ_create3D("new3D", w, h, depth, bitDepth);</code>
	Convert			2D 3D	<code>Ext.CLIJ_convertFloat(input, "result_float"); Ext.CLIJ_convertUInt8(input, "result_uint8"); Ext.CLIJ_convertUInt16(input, "result_uint16");</code>
	Copy				<code>// duplicate Ext.CLIJ_copy(source, result);</code>
	Copy slice	 50	 50	2D 3D	<code>// put a slice into a stack Ext.CLIJ_copySlice(stack, slice, sliceIndex);  // copy a slice out of a stack Ext.CLIJ_copySlice(slice, stack, sliceIndex);</code>
	Crop	 20, 20		2D 3D	<code>// crop image Ext.CLIJ_crop2D("original", "cropped", x, y, width, height);</code>
	Paste	 9, 9		2D 3D	<code>// paste image Ext.CLIJ_x_paste2D("cropped", "target", x, y);</code>
	Release				<code>// free / release memory occupied by an image Ext.CLIJ_release("image name");</code>
	Clear				<code>Ext.CLIJ_clear(); // empty GPU memory</code>
Spatial transforms	Rotate by 90 degrees			2D 3D	<code>Ext.CLIJ_rotateLeft(input, result);</code>
	Rotate	 45, true		2D 3D	<code>Ext.CLIJ_rotate2D(input, result, angle, rotateAroundCenter);</code>
	Flip	 true, false		2D 3D	<code>Ext.CLIJ_flip2D(input, result, flipX, flipY); Ext.CLIJ_flip3D(input, result, flipX, flipY, flipZ);</code>
	Translate	 20, 20		2D 3D	<code>Ext.CLIJ_translate2D(input, result, shiftX, shiftY);</code>
	Affine transform	 "center rotate=45 -center"		2D 3D	<code>transform = "center scale=2 rotate=45 -center"; Ext.CLIJ_affineTransform2D(source, result, transform);</code>
	Deform / warp	  		2D 3D	<code>// warp image Ext.CLIJ_applyVectorField2D(source, vectorFieldX, vectorFieldY, result);</code>
	Projections	  	 	3D -> 2D	<code>Ext.CLIJ_argMaximumZProjection(in, result, arg_z); Ext.CLIJ_x_standardDeviationZProjection(in, result);</code>

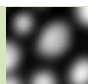

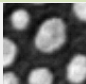

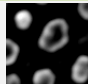

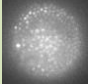

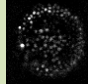

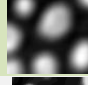

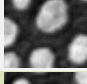

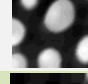

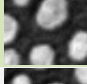

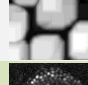

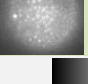

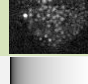

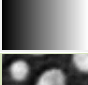

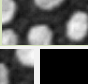

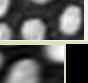

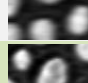

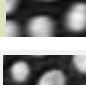

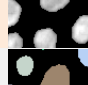

# CLIJ cheat sheet: ImageJ macro II

GPU-accelerated image processing in Fiji

	Operation	Parameters	Result	Dim	Examples
Filters	Gaussian blur	 , 10, 10		2D 3D	<code>Ext.CLIJ_blur2D(input, result, sigmaX, sigmaY);</code> <code>Ext.CLIJ_blur3D(input, result, sigmaX, sigmaY, sigmaZ);</code>
	Difference of Gaussian	 , 2, 2, 20, 20		2D 3D	<code>Ext.CLIJx_differenceOfGaussian2D(input, result, sigma1x, sigma1y, sigma2x, sigma2y);</code>
	Subtract background	 , 25, 25, 0		2D 3D	<code>Ext.CLIJx_subtractBackground3D(input, result, sigmaX, sigmaY, sigmaZ);</code>
	Laplace			2D 3D	<code>Ext.CLIJx_laplace(input, result);</code>
	Mean	 , 5, 5		2D 3D	<code>Ext.CLIJ_mean2DBox(input, result, radiusX, radiusY);</code>
	Median	 , 5, 5		2D 3D	<code>Ext.CLIJ_medianSliceBySliceBox(input, result, radiusX, radiusY);</code>
	Minimum	 , 5, 5		2D 3D	<code>Ext.CLIJ_minimum2DBox(input, result, radiusX, radiusY);</code>
	Maximum	 , 5, 5		2D 3D	<code>Ext.CLIJ_maximum3DBox(input, result, radiusX, radiusY, radiusZ);</code>
	Top-hat	 , 25, 25, 0		2D 3D	<code>Ext.CLIJx_topHatBox(input, result, radiusX, radiusY, radiusZ);</code>
	Logarithm / Exponential			2D 3D	<code>Ext.CLIJx_logarithm(input, result);</code> <code>Ext.CLIJx_exponential(input, result);</code>
	Invert			2D 3D	<code>Ext.CLIJ_invert(input, result);</code>
	Convolve	 		2D 3D	<code>Ext.CLIJ_convolve(input, kernel, result);</code>
	Deconvolve	  , 10		2D 3D	<code>// Richardson-Lucy decon.; for academic purposes</code> <code>Ext.CLIJ_deconvolve(input, kernel, result, iterations);</code>
Segmentation / labeling	Threshold	 "Otsu", 127 or 		2D 3D	<code>Ext.CLIJ_threshold(input, binary_result, 127);</code> <code>Ext.CLIJ_automaticThreshold(input, binary_result, "Otsu");</code> <code>Ext.CLIJ_localThreshold(input, threshold_image, binary_result);</code>
	Mask	 		2D 3D	<code>// mask an image</code> <code>Ext.CLIJ_mask(input, mask, result);</code>
	Connected components			2D 3D	<code>Ext.CLIJx_connectedComponentsLabeling(binary_input, labelmap_result);</code>
	Label to mask	 , 4		2D 3D	<code>Ext.CLIJx_labelToMask(labelmap_input, mask_result, label_index);</code>
	Mask labelled	  , 4		2D 3D	<code>Ext.CLIJx_maskLabel(input, labelmap, result, label_index);</code>

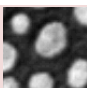

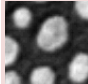

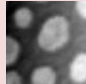

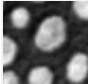

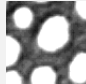

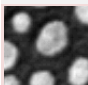

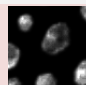

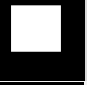

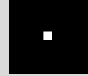

# CLIJ cheat sheet: ImageJ macro III

GPU-accelerated image processing in Fiji

	Operation	Parameters	Result	Dim	Examples
Math	Set	 , 100		2D 3D	<code>Ext.CLIJ_set(result, pixel_value);</code>
	Absolute  x			2D 3D	<code>Ext.CLIJ_absolute(input, result);</code>
	Add / Subtract	 or 50		2D 3D	<code>Ext.CLIJ_addImages(summand1, summand2, result);</code> <code>Ext.CLIJ_addImageAndScalar(input, result, scalar);</code> <code>Ext.CLIJ_addImagesWeighted(in1, in2, result, a,b);</code>
	Multiply / Divide	 , 2		2D 3D	<code>Ext.CLIJ_multiplyImages(input1, input2, result);</code> <code>Ext.CLIJ_multiplyImageAndScalar(input, result, n);</code> <code>Ext.CLIJ_divideImages(divident, divisor, result);</code>
	Power	 , 2 or 		2D 3D	<code>Ext.CLIJ_power(input, result, exponent);</code> <code>Ext.CLIJx_powerImages(input, exp_image, result);</code>
	Equal = Not Equal !=			2D 3D	<code>Ext.CLIJx_equal(source1, source2, result);</code> <code>Ext.CLIJx_notEqual(source1, source2, result);</code>
	Greater / Smaller			2D 3D	<code>Ext.CLIJx_greater(source1, source2, result);</code> <code>Ext.CLIJx_smaller(source1, source2, result);</code> <code>Ext.CLIJx_smallerOrEqual(source1, source2,result);</code>
Binary Images	PullBinary			2D 3D	<code>Ext.CLIJ_pullBinary(String image);</code>
	Draw line / box / sphere	10, 10, 50, 50		2D 3D	<code>Ext.CLIJx_drawLine(result, x1, y1, z1, x2, y2, z2, thickness);</code> <code>Ext.CLIJx_drawBox(result, x, y, z, width, height, depth);</code> <code>Ext.CLIJx_drawSphere(result, x, y, z, radius_x,radius_y,radius_z);</code>
	Not			2D 3D	<code>Ext.CLIJ_binaryNot(source, result);</code>
	And / Intersection	 		2D 3D	<code>Ext.CLIJ_binaryAnd(operand1, operand2, result);</code> <code>Ext.CLIJx_binaryIntersection(op1, op2, result);</code>
	Or / Union	 		2D 3D	<code>Ext.CLIJ_binaryOr(operand1, operand2, result);</code> <code>Ext.CLIJx_binaryUnion(operand1, operand2, result);</code>
	XOr	 		2D 3D	<code>Ext.CLIJ_binaryXOr(operand1, operand2, result);</code>
	Dilate/ Erode			2D 3D	<code>Ext.CLIJ_dilateSphere(source, result);</code> <code>Ext.CLIJx_drawBox(source, result);</code> <code>Ext.CLIJ_erodeSphereSliceBySlice(input, result);</code>

## Detailed documentation

- The API reference is available online and is embedded in Fijis script editor. Start typing "CLIJ" in any macro and it will suggest CLIJ commands.
- Code examples are available on the CLIJ website

## Installation instructions

- Install CLIJ by activating the "clij" update site in Fiji.
- Commands listed as "CLIJx" are under development and can be installed by adding the <https://sites.imagej.net/clij2/> update site. Handle them with care.
